

# How to add a page to your Website / Portfolio

1. Open your pages panel.

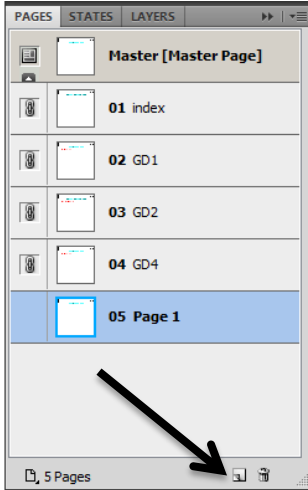

3. On your new page, click in the blank box below your previous one. This will add a chain link

5. Click on your MASTER PAGE. Go up to the navigation bar and type the name of your new page. You will have to readjust the previous hotspots to fit over their previous words.

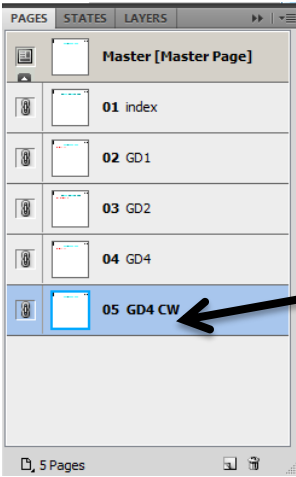

2. Click on your last page so it turns blue. Then click the small icon next to the trash. See arrow below. A new page called Page 1 will appear.

6. Now you will need to create a hotspot. Click on the hotspot button and draw a hotspot on top of your new text.

4. Right-click the name of your new page. Re-name the page according to what you will put there. This example is a graphic design 4 from another student.

7. In the properties panel below, click the drop-down menu next to link and click on the name of your new page.
